

This document outlines the available classes within the current version of the CAREWare 6 API. These classes all exist in the CWApi.vb file in the CW6ApiClient project of our sample application, which can be downloaded in the CW6APIDemo file [here](#).

## Classes:

### ADAPEnrollment

This class provides methods for retrieving, adding, editing, and deleting ADAP Enrollment records.

Code Example for adding a record:

```
Dim useTLS as Boolean = False

Dim serverName as String = "localhost"

Dim providerName as String = "default"

Dim sess as New CWApiSession(useTLS, serverName)

CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)

Dim emptyDoc as Dictionary(Of String, ezjson.JSONValue) =
CWApi.ADAPErollment.emptyCertification(sess)

CWApi.Doc.SetRowValForColumn(emptyDoc, new
ezjson.JSONValue(Date.Today), "adp_en_hs_date")

CWApi.Doc.SetRowValForColumn(emptyDoc, new ezjson.JSONValue("01"),
"adp_en_hs_adp_en_st_rfk")

Note: Assume that there is a variable named clientPK that is set to a client's
primary key

CWApi.ADAPErollment.addCertification(sess, clientPK, emptyDoc)
CWApi.Session.Logout(sess)
```

### AnnualScreening

This class provides methods for retrieving, adding, editing, and deleting Annual Screening records.

Code Example for adding a record:

```
Dim useTLS as Boolean = False

Dim serverName as String = "localhost"
```

```
Dim providerName as String = "default"
```

```
Dim sess as New CWApiSession(useTLS, serverName)
```

```
CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)
```

*Note: Assume that there is a variable named clientPK that is set to a client's primary key*

```
CWApi.AnnualScreening.addScreening(sess, clientPK, Date.Today,
```

```
"3AF46192-E55B-435E-9FF6-65BF3380C3A5",
```

```
"319523D8-0376-4B02-A57E-B893700B8808", "")CWApi.Session.Logout(sess)
```

## **CaseNotes**

This class provides methods for retrieving, adding, editing, and deleting Case Notes.

Code Example for adding a record:

```
Dim useTLS as Boolean = False
```

```
Dim serverName as String = "localhost"
```

```
Dim providerName as String = "default"
```

```
Dim sess as New CWApiSession(useTLS, serverName)
```

```
CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)
```

*Note: Assume that there is a variable named clientPK that is set to a client's primary key*

```
CWApi.CaseNotes.addCaseNote(sess, clientPK, Date.Today, "Test Case Note",  
"") CWApi.Session.Logout(sess)
```

## **Client**

This class provides methods for finding, retrieving, adding, editing, and deleting client related records.

Code Example for adding a client and setting their client id:

```
Dim useTLS as Boolean = False
```

```
Dim serverName as String = "localhost"
```

```
Dim providerName as String = "default"
```

```

Dim sess as New CWApiSession(useTLS, serverName)
CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)
Dim clientPK as String = Guid.NewGuid.ToString()
CWApi.Client.addClient(sess, clientPK, "Fake", "", "Client", "1", "8/29/2005")
CWApi.Client.saveClientPersonalInfo(sess, clientPK, "", "Fake", "", "Client", "1",
"8/29/2005", False, "New Client ID", "", "1") CWApi.Session.Logout(sess)

```

## **CommonStorage**

This class provides methods for managing common storage values.

Code Example for getting and updating the minimum password length:

```

Dim useTLS as Boolean = False
Dim serverName as String = "localhost"
Dim providerName as String = "default"
Dim sess as New CWApiSession(useTLS, serverName)
CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)
Dim oldLength as Integer =
CInt(CWApi.CommonStorage.getCommonStorageNumber(sess,
"minimumPasswordLength")
CWApi.CommonStorage.setCommonStorageNumber(sess,
"minimumPasswordLength", 10) CWApi.Session.Logout(sess)

```

## **CustomFields**

This class provides methods for managing custom fields and editing custom client tabs and custom subform records.

Code Example for adding a custom subform record to the default custom tab:

```

Dim useTLS as Boolean = False
Dim serverName as String = "localhost"
Dim providerName as String = "default"
Dim sess as New CWApiSession(useTLS, serverName)
CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)

```

```
Dim emptyDoc as Dictionary(Of String, ezjson.JSONValue) =  
CWApi.CustomFields.getEmptyCustomSubform(sess,  
"86C5CF2D-4D65-4E6D-9854-1CA13A11E926")  
CWApi.Doc.SetRowValForColumn(emptyDoc, new  
ezjson.JSONValue(Date.Today), "cst_sb_date")
```

*Note: Assume that there is a variable named clientPK that is set to a client's primary key.*

```
CWApi.CustomFields.addCustomSubformRecord(sess, clientPK, emptyDoc)  
CWApi.Session.Logout(sess)
```

## **CustReport**

This class provides methods for managing and running custom reports.

Code Example for running a custom report:

```
Dim useTLS as Boolean = False  
  
Dim serverName as String = "localhost"  
  
Dim providerName as String = "default"  
  
Dim sess as New CWApiSession(useTLS, serverName)  
  
CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)  
  
- getAReportKey is not a real function  
  
Dim ReportPK As String = getAReportKey()  
  
Dim reportStream as CWApi.CWFileStream =  
CWApi.CustReport.GetReportCSVStream (sess, ReportPK, Nothing,  
Date.Today()) reportStream.saveToFile ("C:\Reports\MyReport.csv")  
CWApi.Session.Logout(sess)
```

## **CwFileStream**

This class provides methods for downloading report outputs or uploading and downloading attachments.

Code Example for uploading and downloading an attachment:

```
Dim useTLS as Boolean = False  
  
Dim serverName as String = "localhost"
```

```

Dim providerName as String = "default"

Dim sess as New CWApiSession(useTLS, serverName)

CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)

-   getAContentType is a pseudo function.
    Dim contentType as String = getAContentType()
-   getAttachmentList is a pseudo function.
    Dim attLsPK as string= getAttachmentList()

CW6HttpClient.CWApi.CustomFields.addAttachment(sess, clientPK, attLsPK,
contentType, "C:\Attachments\ProofOfIncome.pdf", "")

-   pickAnAttachment is a pseudo function
    Dim attachmentPK as string = pickAnAttachment()

Dim cwfs As Cw6HttpClient.CwApi.CwFileStream =

Cw6HttpClient.CwApi.CustomFields.getAttachmentFileStream
(sessionVariables.session Info,attachmentPK) Dim tempFolder As String =
IO.Path.Combine(AppDomain.CurrentDomain.BaseDirectory, "temp") If Not
IO.Directory.Exists(tempFolder) Then IO.Directory.CreateDirectory (tempFolder)

End If

Dim fs As IO.FileStream

Try

Dim fileName as string = "ProofOfIncome.pdf",

fs = New IO.FileStream(IO.Path.Combine(tempFolder, fileName),
IO.FileMode.Create)

cwfs.CopyTo(fs)

Catch ex As Exception

Throw ex

Finally

cwfs.Flush()

cwfs.Close()

```

*If Not*

*IsNothing(fs)*

*Then*

*fs.Flush()*

*fs.Close()*

*End If*

*End Try*

- *Open the attachment*

*Process.Start(IO.Path.Combine(tempFolder, fileName))*

*CWApi.Session.Logout(sess)*

## **Eligibility**

This class provides methods for viewing, adding, editing, and deleting eligibility records.

Code Example for adding an eligibility record:

*Dim useTLS as Boolean = False*

*Dim serverName as String = "localhost"*

*Dim providerName as String = "default"*

*Dim sess as New CWApiSession(useTLS, serverName)*

*CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)*

- *pickAClient is a pseudo function*

*Dim clientPK as String = pickAClient()*

*Dim EligibilityData As Dictionary(Of String, ezjson.JSONValue) =*

*Cw6HttpClient.CwApi.Eligibility.getEmptyEligibilityRecord(sessionVariables.sessionInfo)*

*CWApi.Doc.SetRowValForColumn(emptyDoc, new ezjson.JSONValue(Date.Today), "EligibilityDate")*

```

CWApi.Doc.SetRowValForColumn(emptyDoc, new ezjson.JSONValue("1"),
"elg_yes_no_rfk")
CWApi.Doc.SetRowValForColumn(emptyDoc, new
ezjson.JSONValue("FFFFFFFF-0000-0000-0000-000000000002"),
"elg_fnd_sr_fk") Cw6HttpClient.CwApi.Eligibility.addEligibilityRecord(sess,
ClientPK, EligibilityData) CWApi.Session.Logout(sess)

```

## InsuranceAssessment

This class provides methods for viewing, adding, editing, and deleting insurance assessment records.

Code Example for adding a record:

```
Dim useTLS as Boolean = False
```

```
Dim serverName as String = "localhost"
```

```
Dim providerName as String = "default"
```

```
Dim sess as New CWApiSession(useTLS, serverName)
```

```
CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)
```

- *pickAClient* is a pseudo function

```
Dim clientPK as String = pickAClient()
```

- *Adds a Medicaid insurance record*

```
Cw6HttpClient.CwApi.InsuranceAssessment.addInsuranceAssessment(sess,
ClientPK, Date.Today, "3", False, False, False, False, False, True, False,
False, False, False, "", False ) CWApi.Session.Logout(sess)
```

## Lab

This class provides methods for viewing, adding, editing, and deleting lab records.

Code Example for adding a record:

```
Dim useTLS as Boolean = False
```

```
Dim serverName as String = "localhost"
```

```
Dim providerName as String = "default"
```

```
Dim sess as New CWApiSession(useTLS, serverName)
```

```
CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)
```

- *pickAClient* is a pseudo function

```
Dim clientPK as String = pickAClient()
```

- Adds a CD4 Count

```
Cw6HttpClient.CwApi.Lab.addLab(sess, ClientPK, Date.Today,  
"FFFFFFFF-0000-0000-0000-000000000001", "=", 200, "")  
CwApi.Session.Logout(sess)
```

## **User**

This class provides methods for managing user accounts.

Code Example for changing the current user's password:

```
Dim useTLS as Boolean = False
```

```
Dim serverName as String = "localhost"
```

```
Dim providerName as String = "default"
```

```
Dim sess as New CwApiSession(useTLS, serverName)
```

```
CwApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)
```

```
Cw6HttpClient.CwApi.User.ChangeMyPassword(sess, "N3WPa$$w0rd")  
CwApi.Session.Logout(sess)
```

## **Service**

This class provides methods for viewing, adding, editing, and deleting service records.

Code Example for adding a record:

```
Dim useTLS as Boolean = False
```

```
Dim serverName as String = "localhost"
```

```
Dim providerName as String = "default"
```

```
Dim sess as New CwApiSession(useTLS, serverName)
```

```
CwApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)
```

- *pickAClient* is a pseudo function

```
Dim clientPK as String = pickAClient()
```

- *pickAServiceType* is a pseudo function

```
Dim serviceType as String = pickAServiceType()
```

- *pickAContract* is a pseudo function

```
Dim contract as String = pickAContract()
```

- Adds a CD4 Count

```
Cw6HttpClient.CwApi.Service.addService(sess,ClientPK,Date.Today,  
serviceType, 1, 5, 5, contract) CwApi.Session.Logout(sess)
```

## PovertyLevel

This class provides methods for viewing, adding, editing, and deleting poverty level records.

Code Example for adding a record:

```
Dim useTLS as Boolean = False
```

```
Dim serverName as String = "localhost"
```

```
Dim providerName as String = "default"
```

```
Dim sess as New CwApiSession(useTLS, serverName)
```

```
CwApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)
```

- *pickAClient* is a pseudo function

```
Dim clientPK as String = pickAClient()
```

```
Cw6HttpClient.CwApi.Service.addService (sess, ClientPK, Date.Today, 25000,  
1, 25000) CwApi.Session.Logout(sess)
```

## Referral

This class provides methods for viewing, adding, editing, and deleting referral records.

Code Example for adding a record:

```
Dim useTLS as Boolean = False
```

```
Dim serverName as String = "localhost"
```

```
Dim providerName as String = "default"
```

```

Dim sess as New CWApiSession(useTLS, serverName)
CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)
- pickAClient is a pseudo function
Dim clientPK as String = pickAClient()
- pickAProvider is a pseudo function
Dim referToProvider as String = pickAProvider()
- pickAReferralClass is a pseudo function
Dim referralClass As String = pickAReferralClass()
Cw6HttpClient.CwApi.Service.addReferral (sess,ClientPK, Date.Today, "01,"1',
referToProvider, "", "", "001", date.MinValue, "", "", False, referralClass)
CWApi.Session.Logout(sess)

```

## **UserMessages**

This class provides methods for sending user messages.

Code Example for sending a message:

```

Dim useTLS as Boolean = False
Dim serverName as String = "localhost"
Dim providerName as String = "default"
Dim sess as New CWApiSession(useTLS, serverName)
CWApi.Session.Login(sess, "cwtemp", "TEMPCW100", providerName)
- pickAClient is a pseudo function
Dim clientPK as String = pickAClient()
- pickAUser is a pseudo function
Dim sendToUser as String = pickAUser()
Cw6HttpClient.CwApi.Service.addReferral(sess,ClientPK, "Test Message",
sendToUser) CWApi.Session.Logout(sess)

```
